

### Abstract

Disclosed is a type of meta data structure that provides data and/or or a link to such data that is used by an EPG generator in a DTV receiver to display visually-compelling information about an event. Such information can include: an icon associated with the broadcaster of the event and/or the source of the event; a graphic representing a rating of potentially-objectionable content in the event; a still image representative of or having a relation to the event; a video excerpt of or having a relation to the event; an advertisement related to the event, its broadcaster and/or its source; etc.
